

Accuchiller KSE Packaged Outdoor Chiller

120-ton and 40-ton Outdoor Chiller

Standard Features

Direct Drive Scroll Compressors

Direct drive hermetically sealed scroll compressors with proven performance in industrial cooling for reliable, low maintenance, and efficient operation.

Built-In Redundancy

All chillers include dual refrigeration circuits with multiple compressors. The 80 through 120 ton units also incorporate independent process fluid circuits as well. Automatic compressor lead/lag sequencing is standard. PLC control integrates up to 12 circuits across multiple chillers.

Stainless Steel Evaporators

High-efficiency stainless steel plates with copper brazing provide maximum performance, long life, and an enhanced level of protection from harsh process conditions.

Stainless Steel Pumps

Stainless steel pumps were selected for peak performance with the utmost in corrosion protection to ensure a long useful life under severe industrial conditions. Each pump uses TEFC motors for maximum protection from the environment.

Evaporator Inlet Strainer

The evaporator inlet strainer removes debris present in the process fluid to prevent costly downtime and repair due to a clogged chiller evaporator.

Industry Best Ambient Temperature Range

Outdoor air-cooled chillers operate in -20°F up to 125°F ambient temperatures allowing installations in many climates.

Flexible Set Point Range

Wide set point range from 20°F to 80°F. Powerful and innovative PLC control maintains stable +/- 2°F accuracy.

Heavy Gauge Security and Hail Guard Grates

Industrial grade security screens protect exposed components while still allowing access for easy operation and maintenance while also protecting against hail.

Compressor Protection Technology

Our compressor protection technology uses start-to-start anti-recycle control logic to limit cycling under low-load operating conditions to extend compressor life.

Compressor and Pump Run Hour Displays

The ability to monitor compressor and pump running hours is an important tool to assist with scheduling maintenance.

Micro-Channel, Aluminum Condensers

Energy efficient, compact design uses less refrigerant and withstands high pressure spray for easy cleaning.

Power Monitor

The main power monitoring system protects the chiller from extensive damage to the compressor and pump due to loss of phase or phase reversal in the main supply.

Variable Speed Fan Motors

EC fan motors ensure energy efficient operation and lowest possible noise levels. Coupled with electronic expansion valves, Thermal Care's **Dynamic Lift** technology uses the fans to maximize energy efficiency for all ambient conditions.

Temperature Deviation Warnings and Alarms

A warning alerts the operator of a potential problem before a fault occurs and if the condition gets worse, an alarm stops the chiller to prevent damage.

Adjustable Deviation Alarm Time Delays

Allows for programming a start-up alarm time delay to deactivate the alarms long enough for the process loop to stabilize before activating the alarms.

High-Quality 24 VDC Power Supply

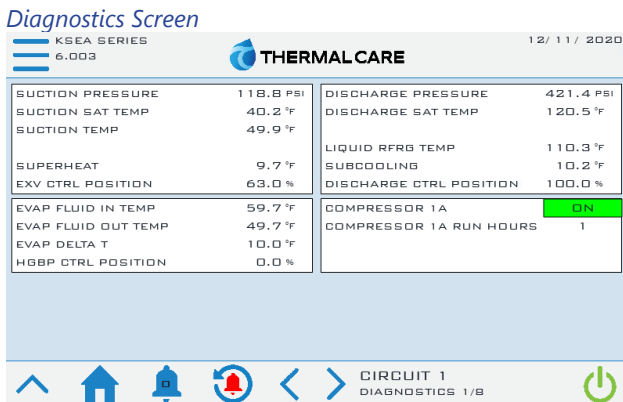

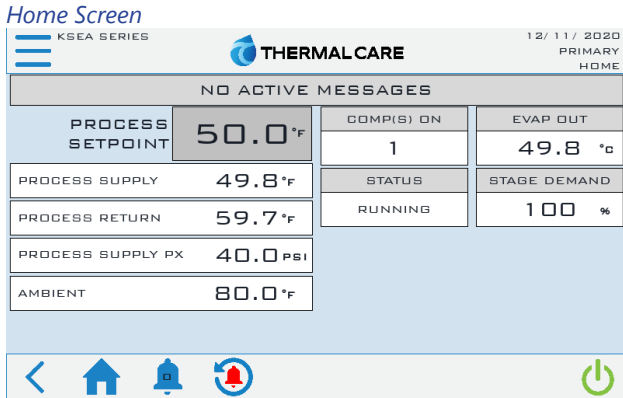

The 24-volt DC power supply ensures dependable control circuit power and isolates the control circuit from static interference to ensure stable and precise operation.

Accuchiller KSE Packaged Outdoor Air Cooled Chiller

UL-508A Industrial Control Panel

Every chiller has a UL label certifying our panel design and components comply with UL 508A standards ensuring the panels are safe and consistent for reliable operation.

7-Inch Color Touch Screen

Warranty

1 year parts on entire unit
1 year labor

Description of Functions	Control Features

● = standard, ○ = optional

Available Options

- High or low pressure pump packages
- Alarm horn
- Alarm relay
- Rotary non-fused or fused disconnect switch
- Air-cooled condenser coating for coastal regions
- Emergency stop button
- Remote HMI with operator interface
- Special color paint
